General Cleaning Instructions for Stainless Steel Products – BURG-WÄCHTER Stainless Steel Letter-boxes

The attractive appearance of Stainless Steel products cannot be regarded as completely maintenance free. All grades of Stainless Steel may in fact stain, discolour or attain an adhering layer of dust/dirt in normal service.

To achieve maximum corrosion resistance the surface of the Stainless Steel must be kept clean.

There are 2 recommended methods for keeping Stainless Steel clean and corrosion free:

1. Regular Cleaning with Water and a Cloth.

Routine cleaning can be easily carried out by using warm water and a cloth. This is the most simple option for cleaning stainless steel. Dry with a towel or cloth to prevent water spots.

2. Stainless Steel Cleaner.

If you already have staining or scratching, or need to polish your stainless steel, a stainless steel cleaner is the next alternative. Some of these cleaners and polishes can help minimize scratching and remove stains. Read the directions on the stainless steel cleaner and test in an inconspicuous spot before using it on the entire product. As with 1. above, to prevent water spots be sure to rinse & dry thoroughly once cleaning is completed.

Note: Please see your Retailer for a product developed specifically to clean BURG-WÄCHTER letter-boxes. **Ref. Order Code: PMF.1-C**

IMPORTANT

When cleaning stainless steel it is always recommended to wipe in the direction of the polish lines (grain) – of the Stainless Steel.
